Excerpt: . lava streams unite with the still more extensive sheets of similar rock along the border of Snake River without any marked topographic or other contrast to indicate that they are not portions of a single series. As will l)o shown bslow, lava sheets originating from volcanoes in the broad central basin in certain instances entered the mouths of lateral valleys and extended up them, as the waters of a lake would do, for a score or more miles. The direction from which the lava in the lateral valleys flowed can in many instances be readily determined and the extent of the individual lava sheets ascertained and mapped, but this does not seem to have been attempted by the survey referred to above. The most definite and, as it seems to me, the most accurate statement in reference to the sources of the Snake...
